

Comparators are used to compare two objects. In this challenge, you'll create a comparator and use it to sort an array.

The *Player* class is provided for you in your editor. It has fields: a `String` and a `int`.

Given an array of *Player* objects, write a comparator that sorts them in order of decreasing score; if or more players have the same score, sort those players alphabetically by name. To do this, you must create a *Checker* class that implements the *Comparator* interface, then write an `int compare(Player a, Player b)` method implementing the [Comparator.compare\(T o1, T o2\)](#) method.

Input Format

Input from stdin is handled by the locked stub code in the *Solution* class.

The first line contains an integer, `n`, denoting the number of players.

Each of the subsequent lines contains a player's `name` and `score`, respectively.

Constraints

- `n` is between 1 and 100.
- players can have the same name.
- Player names consist of lowercase English letters.

Output Format

You are not responsible for printing any output to stdout. The locked stub code in *Solution* will create a *Checker* object, use it to sort the *Player* array, and print each sorted element.

Sample Input

```
5
amy 100
david 100
heraldo 50
aakansha 75
aleksa 150
```

Sample Output

```
aleksa 150
amy 100
```

david 100

aakansha 75

heraldo 50

program :

```
import java.util.*;
```

```
// Write your Checker class here
```

```
class Checker implements Comparator<Player> {
```

```
    public int compare(Player a, Player b) {
```

```
        if (a.score != b.score) {
```

```
            return b.score - a.score;
```

```
        }
```

```
        return a.name.compareTo(b.name);
```

```
    }
```

```
}
```

Output :

The screenshot shows a Java IDE with a light blue sidebar on the left containing a magnifying glass icon and the text "0". The main editor area is divided into two sections. The top section, labeled "Input (stdin)", contains six lines of input: "5", "amy 100", "david 100", "heraldo 50", "aakansha 75", and "aleksa 150". The bottom section, labeled "Your Output (stdout)", contains three lines of output: "aleksa 150", "amy 100", and "david 100". A blue "Download" button is located in the top right corner of the editor area.

Input (stdin)	Output (stdout)
5	
amy 100	
david 100	
heraldo 50	
aakansha 75	
aleksa 150	
	aleksa 150
	amy 100
	david 100
